

Scalability & Future Plan

Date	29 September 2026
Team ID	SWTID-2026-2056
Project Name	Incident Client Script UI Policies
Maximum Marks	1 Mark

Scalability & Future Plan:

This document explains how the Incident Client Script UI Policies project can be enhanced to support more incident form requirements, users, validations, and future ServiceNow features. The solution focuses on improving form usability through client scripts and UI policies while keeping the implementation maintainable and secure.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Multiple client scripts and UI policies may become difficult to manage as form rules increase.	Can cause maintenance difficulty and rule conflicts.	High
2	Complex client-side validations can increase form loading time.	May reduce user experience on the Incident form.	Medium
3	Rules are mainly limited to the Incident form and may not be reusable in other modules.	Duplication of logic may occur in future forms.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Client scripts and UI policies operate on a basic Incident form.	Use efficient conditions, avoid unnecessary scripts, and test rules for a larger number of users.
2	Data Storage	Incident data is handled using standard form fields.	Use well-structured fields, reference data, and archival/retention practices for growing incident records.
3	Performance	Some validations and field changes run on the client side.	Optimize scripts, minimize repeated GlideAjax calls, and move heavy logic to server-side Business Rules or Script Includes when needed.
4	Security	Field visibility and mandatory behavior are controlled by UI policies.	Add role-based access control, ACLs, data validation, and audit tracking

			for sensitive incident information.
--	--	--	-------------------------------------

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Organize existing Incident client scripts and UI policies with clear naming and documentation.	Immediate	Improves maintenance and reduces rule conflicts.
Phase 2	Add advanced validation for category, subcategory, assignment group, priority, and mandatory fields.	Short Term	Improves data quality and reduces incomplete incident records.
Phase 3	Create reusable Script Includes and apply common rules to other ServiceNow forms.	Medium Term	Reduces duplicate code and improves scalability across modules.
Phase 4	Add automation, dashboards, and performance monitoring for Incident form usage.	Long Term	Provides better user experience, reporting, and continuous improvement.
